

**EL DORADO COUNTY PLANNING SERVICES
2850 FAIRLANE COURT
PLACERVILLE, CA 95667**

**ENVIRONMENTAL CHECKLIST FORM
AND DISCUSSION OF IMPACTS**

Project Title: Wilkes Tentative Parcel Map/P07-0027

Lead Agency Name and Address: El Dorado County, 2850 Fairlane Court, Placerville, CA 95667

Contact Person: Robert Peters, Assistant Planner

Phone Number: (530) 621-7428

Property Owner's Name and Address: Michael R. Wilkes Construction, Inc., 5360 Tioga Lane, El Dorado, CA 95623-4406

Project Applicant/Agent's Name and Address: Gene E. Thorne & Associates, Inc., 4080 Plaza Goldorado Circle, Cameron Park, CA 95682

Project Engineer's / Architect's Name and Address: Gene E. Thorne & Associates, Inc., 4080 Plaza Goldorado Circle, Cameron Park, CA 95682

Project Location: North side of El Dorado Road approximately 0.6 miles north of the intersection with Mother Lode Drive, in the El Dorado area.

Assessor's Parcel Number(s): 329-040-55 (12.16 acres)

Zoning: Single-Family Three-Acre Residential (R3A)

Section: 27 **T:** 10N **R:** 10E

General Plan Designation: Medium-Density Residential (MDR)

Description of Project: A tentative parcel map request creating four (4) parcels ranging in size from 3.0 acres to 3.15 acres from a 12.16 acre site. The primary access to the project would consist of the construction of proposed on-site Roads A and B serving Parcels A, B, and C. Also, DOT is requiring a 20-foot roadway width without curb, gutter, and sidewalk (Modified Standard Plan 101B) and frontage improvements to include the widening of El Dorado Road consisting of an 8-foot shoulder. Proposed Parcel C will take access off of El Dorado Road utilizing a 12-foot wide gravel driveway and standard encroachment (Standard Plan 103B-1).

Surrounding Land Uses and Setting:

	<u>Zoning</u>	<u>General Plan</u>	<u>Land Use</u> (e.g., Single Family Residences, Grazing, Park, School)
Site:	R3A	MDR	Single-Family Residence
North:	R3A	MDR	Undeveloped Residential Property
South:	R2	MFR	Single-Family Residences
East:	R1A/R2	MFR	Single-Family Residences
West:	R3A	MDR	Single-Family Residences

Briefly Describe the environmental setting: The subject parcel is at an approximate average elevation of 1,600 feet above mean sea level on the western slope of the Sierra Nevada mountains. The center of the project site is a hilltop. The parcel contains an existing single-family residence which takes its access from and is adjacent to El Dorado Road. The site is contains slopes in excess of 40 percent. Biological communities on the site include mixed oak woodland, and an intermittent channel, seasonal wetland and seeps totaling approximately 0.10 acres. Oak woodland canopy currently covers approximately 5.98 acres (49 percent) of the parcel. Soils consist of Boomer gravelly loam, 15 to 30 percent slopes (BhD); Diamond Springs very fine sandy loam, nine (9) to 15 percent slopes (DfC); and Diamond Springs very rocky sandy loam, 3 to 50 percent slopes (DgE). Boomer

gravelly loam (BhD) has moderately slow permeability, medium surface runoff, and moderate erosion hazard, while Diamond Springs very fine sandy loam (DfC) and very rocky sandy loam (DgE) have moderately slow permeability, medium to rapid runoff, and slight to high erosion hazard.

Other public agencies whose approval is required (e.g., permits, financing approval, or participation agreement.):

El Dorado County Department of Transportation, Diamond Springs/El Dorado Fire Protection District, Environmental Management, Air Quality Management District, County Surveyor, Resource Conservation District.

ENVIRONMENTAL FACTORS POTENTIALLY AFFECTED

The environmental factors checked below would be potentially affected by this project, involving at least one impact that is a "Potentially Significant Impact" as indicated by the checklist on the following pages.

	Aesthetics		Agriculture Resources		Air Quality
X	Biological Resources		Cultural Resources		Geology / Soils
	Hazards & Hazardous Materials		Hydrology / Water Quality		Land Use / Planning
	Mineral Resources		Noise		Population / Housing
	Public Services		Recreation		Transportation/Traffic
	Utilities / Service Systems	X	Mandatory Findings of Significance		

DETERMINATION

On the basis of this initial evaluation:

- I find that the proposed project **COULD NOT** have a significant effect on the environment, and a **NEGATIVE DECLARATION** will be prepared.
- I find that although the proposed project could have a significant effect on the environment, there will not be a significant effect in this case because revisions in the project have been made by or agreed to by the project proponent. A **MITIGATED NEGATIVE DECLARATION** will be prepared.
- I find that the proposed project **MAY** have a significant effect on the environment, and an **ENVIRONMENTAL IMPACT REPORT** is required.
- I find that the proposed project **MAY** have a "potentially significant impact" or "potentially significant unless mitigated" impact on the environment, but at least one effect: 1) has been adequately analyzed in an earlier document pursuant to applicable legal standards; and 2) has been addressed by mitigation measures based on the earlier analysis as described in attached sheets. An **ENVIRONMENTAL IMPACT REPORT** is required, but it must analyze only the effects that remain to be addressed.
- I find that although the proposed project could have a significant effect on the environment, because all potentially significant effects: a) have been analyzed adequately in an earlier EIR or **NEGATIVE DECLARATION**, pursuant to applicable standards; and b) have been avoided or mitigated pursuant to that earlier EIR or **NEGATIVE DECLARATION**, including revisions or mitigation measures that are imposed upon the proposed project, nothing further is required.

Printed Name: Pierre Rivas For: El Dorado County

EVALUATION OF ENVIRONMENTAL IMPACTS

1. A brief explanation is required for all answers except "No Impact" answers that are adequately supported by the information sources a lead agency cites in the parentheses following each question. A "No Impact" answer is adequately supported if the referenced information sources show that the impact simply does not apply to projects like the one involved (e.g., the project falls outside a fault rupture zone). A "No Impact" answer should be explained where it is based on project-specific factors as well as general standards (e.g., the project will not expose sensitive receptors to pollutants, based on a project-specific screening analysis).
2. All answers must take account of the whole action involved, including off-site as well as on-site, cumulative as well as project-level, indirect as well as direct, and construction as well as operational impacts.
3. Once the lead agency has determined that a particular physical impact may occur, then the checklist answers must indicate whether the impact is potentially significant, less than significant with mitigation, or less than significant. "Potentially Significant Impact" is appropriate if there is a fair argument that an effect may be significant. If there are one or more "Potentially Significant Impact" entries when the determination is made, an EIR is required.
4. "Negative Declaration: Less Than Significant With Mitigation Incorporated" applies where the incorporation of mitigation measures has reduced an effect from "Potentially Significant Impact" to a "Less Than Significant Impact." The lead agency must describe the mitigation measures, and briefly explain how they reduce the effect to a less than significant level.
5. Earlier analyses may be used where, pursuant to the tiering, program EIR, or other CEQA process, an effect has been adequately analyzed in an earlier EIR or negative declaration. Section 15063(c)(3)(D). In this case, a brief discussion should identify the following:
 - a. Earlier Analysis Used. Identify and state where they are available for review.
 - b. Impacts Adequately Addressed. Identify which effects from the above checklist were within the scope of and adequately analyzed in an earlier document pursuant to applicable legal standards, and state whether such effects were addressed by mitigation measures based on the earlier analysis.
 - c. Mitigation Measures. For effects that are "Less Than Significant With Mitigation Incorporated," describe the mitigation measures which were incorporated or refined from the earlier document and the extent to which they address site-specific conditions for the project.
6. Lead agencies are encouraged to incorporate into the checklist references to information sources for potential impacts (e.g., general plans, zoning ordinances). Reference to a previously prepared or outside document should, where appropriate, include a reference to the page or pages where the statement is substantiated.
7. Supporting Information Sources: A source list should be attached, and other sources used, or individuals contacted should be cited in the discussion.
8. This is only a suggested form, and lead agencies are free to use different formats; however, lead agencies should normally address the questions from this checklist that are relevant to a project's environmental effects in whatever format is selected.
9. The explanation of each issue should identify:
 - a. the significance criteria or threshold, if any, used to evaluate each question; and
 - b. the mitigation measure identified, if any, to reduce the impact to less than significant.

Potentially Significant Impact	Potentially Significant Unless Mitigation Incorporation	Less Than Significant Impact	No Impact
--------------------------------	---	------------------------------	-----------

ENVIRONMENTAL IMPACTS

I. AESTHETICS. <i>Would the project:</i>			
a. Have a substantial adverse effect on a scenic vista?			X
b. Substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway?		X	
c. Substantially degrade the existing visual character quality of the site and its surroundings?			X
d. Create a new source of substantial light or glare which would adversely affect day or nighttime views in the area?			X

Discussion:

A substantial adverse effect to Visual Resources would result in the introduction of physical features that are not characteristic of the surrounding development, substantially change the natural landscape, or obstruct an identified public scenic vista.

- a) No identified public scenic vistas or designated scenic highways would be affected by this project.
- b) The proposed project would have a less than significant impact on existing scenic resources including, but not limited to, trees, rock outcroppings, and historic resources as the project is not located with a corridor defined as a State scenic highway.
- c) The proposed project will result in four parcels which are suitable for residential use. The surrounding neighborhood is equally well suited to residential use, and has been developed accordingly. The proposed project will not degrade the visual character or quality of the site and its surroundings. The property will continue to provide the natural visual character and quality that currently exists by keeping the scenic areas of the property intact and meeting oak tree canopy retention standards.
- d) The proposed four parcels would not have a significant effect or adversely affect day or nighttime views adjacent to the project site. All outdoor lighting would conform to Section 17.14.170 of the County Zoning Code which prohibits unnecessary and unwarranted illumination of an adjacent property. As such, impacts would be less than significant.

FINDING: It has been determined that there would be no impacts to aesthetics or visual resources. Identified thresholds of significance for the “Aesthetics” category have not been exceeded and no significant adverse environmental effects would result from the project.

Potentially Significant Impact	Potentially Significant Unless Mitigation Incorporation	Less Than Significant Impact	No Impact
--------------------------------	---	------------------------------	-----------

II. AGRICULTURE RESOURCES. <i>Would the project:</i>			
a. Convert Prime Farmland, Unique Farmland, Farmland of Statewide Importance, or Locally Important Farmland (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?		X	
b. Conflict with existing zoning for agricultural use, or a Williamson Act Contract?			X
c. Involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland, to non-agricultural use?			X

Discussion:

A substantial adverse effect to Agricultural Resources would occur if:

- There is a conversion of choice agricultural land to nonagricultural use, or impairment of the agricultural productivity of agricultural land;
 - The amount of agricultural land in the County is substantially reduced; or
 - Agricultural uses are subjected to impacts from adjacent incompatible land uses.
- a) Review of the Important Farmland GIS map layer for El Dorado County developed under the Farmland Mapping and Monitoring Program indicates that no areas of Prime, Unique, or Farmland of Statewide Importance would be affected by the Project. The site does contain Farmland of Local Importance, however, no agricultural land uses are found in the project vicinity, and the property is zoned to allow by right the raising and grazing of domestic farm animals and the cultivation of tree and field crops. El Dorado County has established the Agricultural (A) General Plan Land Use Overlay District and included this overlay on the General Plan Land Use Maps. Review of the General Plan Land Use Map for the project area indicates that there are no areas of “Prime Farmland” or properties designated as being within the Agricultural (A) General Plan Land Use Overlay District area adjacent to the project site. The project would not result in the conversion of farmland to non-agricultural uses.
- b) The proposed project would not conflict with existing agricultural zoning in the project vicinity and would not adversely impact any properties currently under a Williamson Act Contract.
- c) No existing agricultural land would be converted to non-agricultural use as a result of the proposed project.

FINDING: It has been determined that the project would have a less than significant impact to agricultural lands or properties subject to a Williamson Act Contract. The surrounding area is developed with residential development. For the “Agriculture” category, the identified thresholds of significance have not been exceeded and no significant environmental effects would result from the project.

Potentially Significant Impact	Potentially Significant Unless Mitigation Incorporation	Less Than Significant Impact	No Impact
--------------------------------	---	------------------------------	-----------

III. AIR QUALITY. <i>Would the project:</i>			
a. Conflict with or obstruct implementation of the applicable air quality plan?			X
b. Violate any air quality standard or contribute substantially to an existing or projected air quality violation?			X
c. Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard (including releasing emissions which exceed quantitative thresholds for ozone precursors)?			X
d. Expose sensitive receptors to substantial pollutant concentrations?			X
e. Create objectionable odors affecting a substantial number of people?			X

Discussion:

A substantial adverse effect on Air Quality would occur if:

- Emissions of ROG and No_x, will result in construction or operation emissions greater than 82lbs/day (See Table 5.2, of the El Dorado County Air Pollution Control District – CEQA Guide);
- Emissions of PM₁₀, CO, SO₂ and No_x, as a result of construction or operation emissions, will result in ambient pollutant concentrations in excess of the applicable National or State Ambient Air Quality Standard (AAQS). Special standards for ozone, CO, and visibility apply in the Lake Tahoe Air Basin portion of the County; or
- Emissions of toxic air contaminants cause cancer risk greater than 1 in 1 million (10 in 1 million if best available control technology for toxics is used) or a non-cancer Hazard Index greater than 1. In addition, the project must demonstrate compliance with all applicable District, State and U.S. EPA regulations governing toxic and hazardous emissions.

a) El Dorado County has adopted the *Rules and Regulations of the El Dorado County Air Pollution Control District* (February 15, 200) establishing rules and standards for the reduction of stationary source air pollutants (ROG/VOC, NO_x, and O₃) Activities related to the implementation of this parcel map would create a less than significant impact for air quality. Items are included in the conditions for project approval that require grading and construction activities to implement specific measures such as a Fugitive Dust Mitigation Plan and reduction of air pollutants from vehicles and equipment in order to reduce the likelihood of defined particulate in this category. Therefore, the potential impacts of the project would be less than significant.

b,c) The El Dorado County Air Quality Management District (AQMD) reviewed the project and determined that with the implementation of standard County measures, the project would have a less than significant impact on the air quality. As part of the measures, an asbestos dust mitigation plan application must be prepared and submitted to the AQMD if naturally occurring asbestos is encountered during project construction. These measures are included as conditions of project approval within Attachment 1 of the staff report and would reduce any impact in this category to a level of less than significant.

Potentially Significant Impact	Potentially Significant Unless Mitigation Incorporation	Less Than Significant Impact	No Impact
--------------------------------	---	------------------------------	-----------

- d) The El Dorado County Air AQMD reviewed the project and identified that no sensitive receptors exist in the area and would not be affected by this project. As such, the proposed project will not expose sensitive receptors to substantial pollutant concentrations.
- e) Residential development is not classified as an odor generating facility within Table 3.1 of the El Dorado County Air Quality Management District CEQA Guide. The proposed residential parcel map would not result in significant impacts resulting from odors. Impacts would be less than significant.

FINDING: It was determined that a less than significant impact would result from the project in that no sensitive receptors would be adversely impacted, no objectionable odors would be created and the project would not obstruct the implementation of the El Dorado County California Clean Air Act Plan. Based on the inclusion of standard conditions of approval, no significant adverse environmental effects would result from the project.

IV. BIOLOGICAL RESOURCES. <i>Would the project:</i>			
a. Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?			X
b. Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?			X
c. Have a substantial adverse effect on federally protected wetlands as defined by Section 404 of the Clean Water Act (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?			X
d. Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?		X	
e. Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?			X
f. Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?			X

Discussion:

A substantial adverse effect on Biological Resources would occur if the implementation of the project would:

- Substantially reduce or diminish habitat for native fish, wildlife or plants;
- Cause a fish or wildlife population to drop below self-sustaining levels;
- Threaten to eliminate a native plant or animal community;

Potentially Significant Impact	Potentially Significant Unless Mitigation Incorporation	Less Than Significant Impact	No Impact
--------------------------------	---	------------------------------	-----------

- Reduce the number or restrict the range of a rare or endangered plant or animal;
- Substantially affect a rare or endangered species of animal or plant or the habitat of the species; or
- Interfere substantially with the movement of any resident or migratory fish or wildlife species.

- a) Sycamore Environmental Consultants, Inc., conducted field surveys for biological resources on the 12.16-acre property in April of 2006. According to the study, “The PSA provides potential habitat for Brandegee’s clarkia. Brandegee’s clarkia was not observed in the PSA. The fieldwork was conducted outside the evident and identifiable period for Brandegee’s clarkia. If Brandegee’s clarkia is present in the PSA, it may not have been detected.” (*Biological Resources Evaluation and Preliminary Jurisdiction Delineation for Wilkes Tentative Parcel Map, El Dorado County, CA, January 30, 2007*) Sycamore Environmental Consultants, Inc., conducted a subsequent field survey to search for members of the Clarkia genus. According to the update to the biological resources evaluation “Clarkia biloba ssp. biloba, a species closely related to Brandegee’s clarkia, was evident and identifiable and observed at the project site. Both C. biloba ssp. biloba and Brandegee’s clarkia occur in similar habitats and have the same published blooming period (Munz, P. 1970 A California flora. 5th printing. University of California Press, Berkely, CA.). The C. biloba ssp. biloba serves as a reference population indicating Brandegee’s clarkia was evident and identifiable on the date of survey.”(*Update to the Biological Resources Evaluation for the Wilkes Tentative Parcel Map Project, El Dorado County, CA, August 4, 2008*) During the field survey Brandegee’s clarkia was not observed at the project site and no impact would occur.
- b) The project proposes no impacts to riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service. The site includes areas that are classified as wetlands, intermittent drainage swales, and seeps. The tentative parcel map provides the required 50-foot buffer for wetlands and the intermittent drainage swale that exists on the property. Any future development must observe these buffer areas or request relief under the provisions of established County policies as adopted by the General Plan. Impacts would be less than significant.
- c) The project does not propose impacts to federally protected wetlands as defined by Section 404 of the Clean Water Act (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means. The project site contains wetlands, an intermittent drainage swale, and seeps. These areas have been identified on the tentative parcel map and future development must observe the required 50-foot buffer during any development activity. Impacts would be less than significant.
- d) Review of the California Fish and Game *Deer Ranges Map* (1990) indicates that there are no mapped critical deer migration corridors within the project site. According to the biological study, “The PSA provides potential nesting habitat for birds of prey and migratory birds.” (*Biological Resources Evaluation and Preliminary Jurisdiction Delineation for Wilkes Tentative Parcel Map, El Dorado County, CA, January 30, 2007*) However, with implementation of the mitigation measure below, the project would not substantially interfere with the movement of any native resident or migratory fish or wildlife species or with any established native resident or migratory wildlife corridors, or impede the use of wildlife nursery sites. Impacts would be less than significant.

MM BIO-1: If construction begins outside the February 1 to August 31 breeding season, there will be no need to conduct a preconstruction survey for active nests. If a nest becomes active after construction has started, then the bird is considered adapted to construction disturbance.

If construction is scheduled to begin between February 1 to August 31 then a qualified biologist shall conduct a preconstruction survey for active nests at the project site and within 250-foot radius of the construction site from publicly accessible areas within 30 days prior to construction. If no active nests of a bird of prey or Migratory Bird Treaty Act (MBTA) bird are found, then no further mitigation measures are necessary.

Potentially Significant Impact	Potentially Significant Unless Mitigation Incorporation	Less Than Significant Impact	No Impact
--------------------------------	---	------------------------------	-----------

If an active nest of a bird of prey or MBTA bird is found in the project study area, then the biologist shall flag the active nest tree so that a minimum 250-foot Environmentally Sensitive Area (ESA) around the nest tree.

The construction contractor shall install stakes or temporary flagging, fencing, etc., at the edge of the minimum 250-foot ESA. The ESA shall be maintained throughout the construction period. No disturbance shall occur within 250 feet of a nest tree until a qualified biologist determines that the nest is no longer active.

Timing/Implementation: If construction begins during the nesting season (February 1 to August 31), the preconstruction survey shall be conducted no more than 30 days prior to clearing and grubbing and submitted prior to grading permit issuance.

Enforcement/Monitoring: El Dorado County Planning Services

- e) The project would not conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance. Oak canopy covered an estimated 7.25 acres, or 60 percent of the 12.16 acre project site based on April 1, 2004 aerial photo, however, oak canopy covered an estimated 5.98 acres based on May 1, 2006 aerial photo. An estimated 1.27 acres of oak canopy was removed between April 1, 2004 and May 1, 2006. This oak canopy removal was in violation of General Plan Policy 7.4.4.4 and Planning Services has determined that the oak canopy analysis shall be based on the April 1, 2004 coverage. Existing project oak tree canopy coverage is estimated at 5.98 acres, or 49 percent of the 12.16 acre site. (*Updated Oak canopy analysis for El Dorado Road Shoulder Widening for the Wilkes Parcel Map Project, El Dorado County, Sycamore Environmental Consultants, Inc., July 17, 2008*) Under General Plan Policy 7.4.4.4, Option A, 70 percent of the existing canopy must be retained. As proposed, the project would retain 53.1 percent of the oak tree canopy at the site and does not meet the oak canopy retention standards of General Plan Policy 7.4.4.4, Option A. The applicant proposes to comply with Policy 7.4.4.4 by utilization of either a combination of Option A & B or only Option B, which would be consistent with the Oak Woodland Conservation Ordinance. Impacts to oak woodlands would be less than significant.
- f) The project would not conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan or other approved local, regional or state habitat conservation plan. Impacts would be less than significant.

FINDING: There would be no significant impacts to biological resources, oak trees and/or oak woodland tree canopy with mitigation. As such, the impacts to in the “Biological Resources” category would be less than significant for this project.

V. CULTURAL RESOURCES. Would the project:			
a. Cause a substantial adverse change in the significance of a historical resource as defined in Section 15064.5?			X
b. Cause a substantial adverse change in the significance of archaeological resource pursuant to Section 15064.5?			X
c. Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?			X
d. Disturb any human remains, including those interred outside of formal			X

Potentially Significant Impact	Potentially Significant Unless Mitigation Incorporation	Less Than Significant Impact	No Impact
--------------------------------	---	------------------------------	-----------

V. CULTURAL RESOURCES. <i>Would the project:</i>			
cemeteries?			

Discussion:

In general, significant impacts are those that diminish the integrity, research potential, or other characteristics that make a historical or cultural resource significant or important. A substantial adverse effect on Cultural Resources would occur if the implementation of the project would:

- Disrupt, alter, or adversely affect a prehistoric or historic archaeological site or a property or historic or cultural significant to a community or ethnic or social group; or a paleontological site except as a part of a scientific study;
- Affect a landmark of cultural/historical importance;
- Conflict with established recreational, educational, religious or scientific uses of the area; or
- Conflict with adopted environmental plans and goals of the community where it is located.

a,b) The applicant submitted a “Cultural Resources Study of APN 329:040:49 Near El Dorado Road, El Dorado County, California” prepared by Historic Resource Associates in March 2006. According to the study “No significant prehistoric or historic archaeological sites, features, or artifacts were found, nor were any historic buildings, structures, or objects found.” (*Cultural Resources Study of APN 329:040:49 Near El Dorado Road, El Dorado County, California, March 2006*). No further cultural resource study is recommended. In the event sub-surface historical, cultural, or archeological sites or materials are disturbed during earth disturbances and grading activities on the site, standard conditions are included within Attachment 1 of the staff report to reduce any potential impacts to a less than significant level.

c) A unique paleontological site would include a known area of fossil bearing rock strata. The project site does not contain any known paleontological sites or known fossil strata/locales.

d) Due to the size and scope of the project, there is not a high potential to discover human remains outside of a dedicated cemetery. In the event of the accidental discovery or recognition of any human remains in any location other than a dedicated cemetery, the standard conditions within Attachment 1 shall be implemented immediately.

FINDING: Although the project has the potential to impact sub-surface cultural or historic resources, or disturb human remains located outside of a designated cemetery, the application of the standard conditions identified in Attachment 1 of the staff report addresses such impacts. Established thresholds of significance would not be exceeded within the “Cultural Resources” category.

VI. GEOLOGY AND SOILS. <i>Would the project:</i>			
a. Expose people or structures to potential substantial adverse effects, including the risk of loss, injury, or death involving:			X
i) Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42.			X
ii) Strong seismic ground shaking?			X

Potentially Significant Impact	Potentially Significant Unless Mitigation Incorporation	Less Than Significant Impact	No Impact
--------------------------------	---	------------------------------	-----------

VI. GEOLOGY AND SOILS. <i>Would the project:</i>			
iii) Seismic-related ground failure, including liquefaction?			X
iv) Landslides?			X
b. Result in substantial soil erosion or the loss of topsoil?			X
c. Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction or collapse?			X
d. Be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994) creating substantial risks to life or property?			X
e. Have soils incapable of adequately supporting the use of septic tanks or alternative waste water disposal systems where sewers are not available for the disposal of waste water?			X

Discussion:

A substantial adverse effect on Geologic Resources would occur if the implementation of the project would:

- Allow substantial development of structures or features in areas susceptible to seismically induced hazards such as groundshaking, liquefaction, seiche, and/or slope failure where the risk to people and property resulting from earthquakes could not be reduced through engineering and construction measures in accordance with regulations, codes, and professional standards;
 - Allow substantial development in areas subject to landslides, slope failure, erosion, subsidence, settlement, and/or expansive soils where the risk to people and property resulting from such geologic hazards could not be reduced through engineering and construction measures in accordance with regulations, codes, and professional standards; or
 - Allow substantial grading and construction activities in areas of known soil instability, steep slopes, or shallow depth to bedrock where such activities could result in accelerated erosion and sedimentation or exposure of people, property, and/or wildlife to hazardous conditions (e.g., blasting) that could not be mitigated through engineering and construction measures in accordance with regulations, codes, and professional standards.
- a) According to the Fault Activity Map of California and Adjacent Areas (Jennings, 1994) and the Peak Acceleration from Maximum Credible Earthquakes in California (CDMG, 1992), no active faults or Earthquake Fault Zones (Special Studies Zones) are located on the project site. The impacts from fault ruptures, seismically induced ground shaking, or seismic ground failure or liquefaction are considered to be less than significant. Any potential impact caused by locating structures in the project area would be offset by the compliance with the Uniform Building Code earthquake standards. The project is not located in an area with significant topographic variation in slope. Therefore, the potential for mudslides or landslides is less than significant.
- b) According to the submitted drainage plan, “Pre-Development and Post-Development drainage conditions will not change.” (*Wilkes Preliminary Grading Plan, Gene E. Thorne and Associates Inc., May 7, 2008*) Project grading will be required for improvements associated to road construction and widening, driveway, and general access improvements.

Potentially Significant Impact	Potentially Significant Unless Mitigation Incorporation	Less Than Significant Impact	No Impact
--------------------------------	---	------------------------------	-----------

No mass pad grading is proposed. All grading must be in compliance with the El Dorado County Grading, Erosion and Sediment Control Ordinance which would reduce any potentially significant impact to a less than significant level.

- c,d) As stated in the *Soil Survey of El Dorado Area, California, 1974*, the soils on the project site are primarily comprised of Boomer gravelly loam, 15 to 30 percent slopes (BhD); Diamond Springs very fine sandy loam, nine (9) to 15 percent slopes (DfC); and Diamond Springs very rocky sandy loam, 3 to 50 percent slopes. The parcel contains an existing single-family residence with septic system. Boomer gravelly loam (BhD) has moderately slow permeability, medium surface runoff, and moderate erosion hazard, while Diamond Springs very fine sandy loam (DfC) and very rocky sandy loam (DgE) have moderately slow permeability, medium to rapid runoff, and slight to high erosion hazard. The project is not located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction or collapse, or be located on expansive soil. All grading must be in compliance with the El Dorado County Grading, Erosion, and Sediment Control Ordinance which would reduce any potentially significant impact to a less than significant level.
- e) Waste discharge area analysis was completed and submitted to the El Dorado County Environmental Management Department – Environmental Health Division for review and approval. The analysis was approved on April 7, 2008. Impacts would be less than significant.

FINDING: No significant impacts would result from geological or seismological anomalies on the project site. The site does not contain expansive soils or other characteristics that would result in significant impacts. For the “Geology and Soils” category, established thresholds would not be exceeded by development of the project and no significant adverse environmental effects would result from the project..

VII. HAZARDS AND HAZARDOUS MATERIALS. <i>Would the project:</i>			
a. Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?			X
b. Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?			X
c. Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?			X
d. Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?			X
e. For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard for people residing or working in the project area?			X
f. For a project within the vicinity of a private airstrip, would the project result in a safety hazard for people residing or working in the project area?			X
g. Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?			X

Potentially Significant Impact	Potentially Significant Unless Mitigation Incorporation	Less Than Significant Impact	No Impact
--------------------------------	---	------------------------------	-----------

VII. HAZARDS AND HAZARDOUS MATERIALS. <i>Would the project:</i>			
h. Expose people or structures to a significant risk of loss, injury or death involving wildland fires, including where wildlands are adjacent to urbanized areas or where residences are intermixed with wildlands?			X

Discussion:

A substantial adverse effect due to Hazards or Hazardous Materials would occur if implementation of the project would:

- Expose people and property to hazards associated with the use, storage, transport, and disposal of hazardous materials where the risk of such exposure could not be reduced through implementation of Federal, State, and local laws and regulations;
 - Expose people and property to risks associated with wildland fires where such risks could not be reduced through implementation of proper fuel management techniques, buffers and landscape setbacks, structural design features, and emergency access; or
 - Expose people to safety hazards as a result of former on-site mining operations.
- a) No significant amount of hazardous materials would be transported, used, or disposed of for the project. Impacts would be less than significant.
 - b) No significant amount of hazardous materials will be used for the project. Current County records indicate the subject site is located within the Asbestos Review Area. As such, the project would be required to comply with Rule 232-2 Fugitive Dust-Asbestos Hazard Mitigation if the project includes disturbance of 20 cubic yards or more of earth. Submittal of an asbestos dust mitigation plan is required as a standard condition of approval within Attachment 1 of the staff report to address this issue. The project would not result in any reasonable foreseeable upset and accident conditions involving the release of hazardous materials into the environment with the incorporation of the conditions of approval in Attachment 1.
 - c) As propose, the project would not emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school.
 - d) The project site is not identified on any list compiled pursuant to California Government Code 65962.5 identifying any hazardous material in the project vicinity. As such, there would be a less than significant impact from hazardous material sites.
 - e) *The San Francisco Sectional Aeronautical Chart*, last updated March 22, 2001, was reviewed and the project site is not located within two miles of a public airport. As such, the project would not be subject to any land use limitations contained within any adopted Comprehensive Land Use Plan. There would be no impacts to the project site resulting from public airport operations and the over-flight of aircraft in the vicinity of the project site.
 - f) *The San Francisco Sectional Aeronautical Chart*, last updated March 22, 2001, was reviewed and the project site is not located within two miles of a privately owned airstrip. As such, there is no significant safety hazard resulting from private airport operations and the over-flight of aircraft in the vicinity of the project site. No impacts would occur.

Potentially Significant Impact	Potentially Significant Unless Mitigation Incorporation	Less Than Significant Impact	No Impact
--------------------------------	---	------------------------------	-----------

- g) The proposed project will not physically interfere with the implementation of the County adopted emergency response and/or evacuation plan for the County. The County emergency response plan is located within the County Office of Emergency Services in the El Dorado County Government Center complex in Placerville. Impacts would be less than significant.
- h) The degree of hazard in wild-land areas depends on weather variables like temperature, wind, and moisture, the amount of dryness and arrangement of vegetation, slope steepness, and accessibility to human activities, accessibility of firefighting equipment, and fuel clearance around structures. The project has been conditioned by Diamond Springs – El Dorado Fire Protection District and the applicant has revised the tentative parcel map to implement fire safe measures based on Fire District comments including turnarounds and turnouts, 12 foot driveway widths, and roads consistent with DOT requirements. The project has been conditioned to require an approved Fire Safe Plan prior to filing the parcel map. To reduce impacts to a less than significant level, the project shall be required to comply with the “Fire Safe Requirements” and fully implement the approved Wildfire Fire Safe Plan.

FINDING: The proposed project will not expose people and property to hazards associated with the use, storage, transport and disposal of hazardous materials, and expose people and property to risks associated with wild land fires. For this “Hazards and Hazardous Materials” category, the thresholds of significance would not be exceeded by the proposed project with the implementations of standard conditions of approval from Air Quality Management District and implementation of a fire safe plan.

VIII. HYDROLOGY AND WATER QUALITY. <i>Would the project:</i>				
a. Violate any water quality standards or waste discharge requirements?			X	
b. Substantially deplete groundwater supplies or interfere substantially with groundwater recharge such that there would be a net deficit in aquifer volume or a lowering of the local groundwater table level (e.g., the production rate of pre-existing nearby wells would drop to a level which would not support existing land uses or planned uses for which permits have been granted)?			X	
c. Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river, in a manner which would result in substantial erosion or siltation on- or -off-site?			X	
d. Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river, or substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or off-site?			X	
e. Create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff?			X	
f. Otherwise substantially degrade water quality?			X	
g. Place housing within a 100-year flood hazard area as mapped on a federal Flood Hazard Boundary or Flood Insurance Rate Map or other flood hazard delineation map?				X

Potentially Significant Impact	Potentially Significant Unless Mitigation Incorporation	Less Than Significant Impact	No Impact
--------------------------------	---	------------------------------	-----------

VIII. HYDROLOGY AND WATER QUALITY. <i>Would the project:</i>			
h. Place within a 100-year flood hazard area structures which would impede or redirect flood flows?			X
i. Expose people or structures to a significant risk of loss, injury or death involving flooding, including flooding as a result of the failure of a levee or dam?		X	
j. Inundation by seiche, tsunami, or mudflow?			X

Discussion:

A substantial adverse effect on Hydrology and Water Quality would occur if the implementation of the project would:

- Expose residents to flood hazards by being located within the 100-year floodplain as defined by the Federal Emergency Management Agency;
 - Cause substantial change in the rate and amount of surface runoff leaving the project site ultimately causing a substantial change in the amount of water in a stream, river or other waterway;
 - Substantially interfere with groundwater recharge;
 - Cause degradation of water quality (temperature, dissolved oxygen, turbidity and/or other typical stormwater pollutants) in the project area; or
 - Cause degradation of groundwater quality in the vicinity of the project site.
- a) The project waste discharge area analysis was reviewed and approved by the Environmental Management Department. Impacts would be less than significant.
 - b) There is no evidence that the project would substantially reduce or alter the quantity of groundwater in the vicinity, or materially interfere with groundwater recharge in the area of the proposed project. The proposed project would be required to connect to public water. Impacts would be less than significant.
 - c) Proposed grading and ground disturbances associated with the project would not substantially alter the existing drainage patterns on or off the site. The *Grading Erosion and Sediment Control Ordinance* contains specific requirements that limit the impacts to a drainage system (Section 15.14.440 & Section 15.14.590). The standards apply to this project. As such, impacts would be less than significant.
 - d,e) As stated on the submitted preliminary grading plan, “Pre-Development and Post-Development drainage conditions will not change.” (*Wilkes Preliminary Grading Plan, Gene E. Thorne and Associates Inc., May 7, 2008*) Therefore, substantial drainage pattern alteration or runoff would not occur. Impacts would be less than significant.
 - f) The project will not result in substantial degradation of water quality in either surface or sub-surface water bodies in the vicinity of the project area. All stormwater and sediment control methods contained in the *Grading, Erosion and Sediment Control Ordinance* must be met during all construction activities, as well as the required development of any permanent storm drainage facilities and erosion control measures on the project site. The proposed septic system design for the project was reviewed and approved by the El Dorado County Environmental Management Department, Environmental Health Division. There is no evidence that the cumulative effect of the new septic systems in conjunction

Potentially Significant Impact	Potentially Significant Unless Mitigation Incorporation	Less Than Significant Impact	No Impact
--------------------------------	---	------------------------------	-----------

with other existing septic systems in the project area would degrade the area’s water quality. As such, impacts would be less than significant.

- g,h) The Flood Insurance Rate Map (Panel 060040 0750B, 10/18/83) for the project area establishes that the project site is not located within a mapped 100-year floodplain. No impact would occur.
- i) The subject property in the El Dorado/Diamond Springs area is not located adjacent to or downstream from a dam or levee that has the potential to fail and inundate the project site with floodwaters. Impacts would be less than significant.
- j) The proposed project is not located near a costal area, and therefore, the project site would not be susceptible to tsunamis. No volcanoes or other active volcanic features are near the project site and, therefore, the project site would not be susceptible to mudflows. No impacts would occur.

FINDING: No significant hydrological impacts would result from development of the project. For the “Hydrology and Water Quality” section, it has been determined the project would not exceed the identified thresholds of significance and no significant adverse environmental effects would result from the project.

IX. LAND USE PLANNING. <i>Would the project:</i>			
a. Physically divide an established community?			X
b. Conflict with any applicable land use plan, policy, or regulation of an agency with jurisdiction over the project (including, but not limited to, the general plan, specific plan, local coastal program, or zoning ordinance) adopted for the purpose of avoiding or mitigating an environmental effect?			X
c. Conflict with any applicable habitat conservation plan or natural community conservation plan?			X

Discussion:

A substantial adverse effect on Land Use would occur if the implementation of the project would:

- Result in the conversion of Prime Farmland as defined by the State Department of Conservation;
- Result in conversion of land that either contains choice soils or which the County Agricultural Commission has identified as suitable for sustained grazing, provided that such lands were not assigned urban or other nonagricultural use in the Land Use Map;
- Result in conversion of undeveloped open space to more intensive land uses;
- Result in a use substantially incompatible with the existing surrounding land uses; or
- Conflict with adopted environmental plans, policies, and goals of the community.

- a) The project would not result in the physical division of an established community. As proposed, the project is compatible with the surrounding residential land uses and would not create land use conflicts with surrounding properties. Impacts would be less than significant.
- b) As proposed, the project is consistent with specific, fundamental, and mandatory land use goals, objectives, and policies of the 2004 General Plan. The parcel map is consistent with the development standards within the El Dorado County

Potentially Significant Impact	Potentially Significant Unless Mitigation Incorporation	Less Than Significant Impact	No Impact
--------------------------------	---	------------------------------	-----------

Zoning Ordinance and local subdivision policies. Future development must meet the standards established by the Single-Family Three-Acre Residential (R3A) zone district. This project meets the land use objectives established for the property. As no conflict exists between the project and applicable land use policies, potential environmental impacts would be considered to be less than significant.

- c) The project site is not within the boundaries of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or any other conservation plan. This condition precludes the possibility of the proposed project conflicting with an adopted conservation plan. No impact would occur.

FINDING: For the “Land Use Planning” section, the project would not exceed the identified thresholds of significance. As such, no significant environmental impacts will result from the project.

X. MINERAL RESOURCES. <i>Would the project:</i>			
a. Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?			
b. Result in the loss of availability of a locally-important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan?			

Discussion:

A substantial adverse effect on Mineral Resources would occur if the implementation of the project would:

- Result in obstruction of access to, and extraction of mineral resources classified MRZ-2x, or result in land use compatibility conflicts with mineral extraction operations.
- a) The project site is not mapped as being within a Mineral Resource Zone (MRZ) by the State of California Division of Mines and Geology or in the El Dorado County General Plan. No impact would occur
 - b) The Western portion of El Dorado County is divided into four, 15 minute quadrangles (Folsom, Placerville, Georgetown, and Auburn) mapped by the State of California Division of Mines and Geology showing the location of Mineral and Resource Zones (MRZ). Those areas which are designated MRZ-2a contain discovered mineral deposits that have been measured or indicate reserves calculated. Land in this category is considered to contain mineral resources of known economic importance to the County and/or State. Review of the mapped areas of the County indicates that the subject property does not contain mineral resources of known local or statewide economic value. No impact would occur.

FINDING: No impacts to any known mineral resources will occur as a result of the project. In the ‘Mineral Resources’ section, the project would not exceed the identified thresholds of significance.

Potentially Significant Impact	Potentially Significant Unless Mitigation Incorporation	Less Than Significant Impact	No Impact
--------------------------------	---	------------------------------	-----------

XI. NOISE. <i>Would the project result in:</i>			
a. Exposure of persons to or generation of noise levels in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?			X
b. Exposure of persons to or generation of excessive groundborne vibration or groundborne noise levels?			X
c. A substantial permanent increase in ambient noise levels in the project vicinity above levels existing without the project?			X
d. A substantial temporary or periodic increase in ambient noise levels in the project vicinity above levels existing without the project?			X
e. For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise level?			X
f. For a project within the vicinity of a private airstrip, would the project expose people residing or working in the project area to excessive noise levels?			X

Discussion:

A substantial adverse effect due to Noise would occur if the implementation of the project would:

- Result in short-term construction noise that creates noise exposures to surrounding noise sensitive land uses in excess of 60dBA CNEL;
- Result in long-term operational noise that creates noise exposures in excess of 60 dBA CNEL at the adjoining property line of a noise sensitive land use and the background noise level is increased by 3dBA, or more; or
- Results in noise levels inconsistent with the performance standards contained in Table 6-1 and Table 6-2 in the El Dorado County General Plan.

a,c) The proposed project would not result in a substantial increase in existing ambient noise levels in the project vicinity. The project would not generate noise levels exceeding the performance standards contained in Table 6-1 and Table 6-2 within the General Plan as it involves the creation of three additional parcels and related residential noise. Other than temporary noise generated from the construction equipment, no significant noise would be expected from the development of the project. As such, impacts would be less than significant.

b,d) Persons adjacent to the project vicinity would not be subjected to long-term excessive ground borne noise or ground borne vibration as a result of grading and improvement activities or upon completion of the project. Impacts would be less than significant.

e) The proposed project is not located adjacent to or in the vicinity of a public airport and is not subject to any noise standards contained within a Comprehensive Land Use Plan (CLUP). As such, the project would not be subjected to excessive noise from a public airport. No impacts would occur.

Potentially Significant Impact	Potentially Significant Unless Mitigation Incorporation	Less Than Significant Impact	No Impact
--------------------------------	---	------------------------------	-----------

f) The proposed project is not located adjacent to or in the vicinity of a private airstrip. As such, the project would not be subjected to excessive noise from a private airport. There will be no impacts within this category.

FINDING: For the ‘Noise’ section, the thresholds of significance have not been exceeded and no significant environmental impacts will result from the project.

XII. POPULATION AND HOUSING. <i>Would the project:</i>			
a. Induce substantial population growth in an area, either directly (i.e., by proposing new homes and businesses) or indirectly (i.e., through extension of roads or other infrastructure)?			X
b. Displace substantial numbers of existing housing, necessitating the construction of replacement housing elsewhere?			X
c. Displace substantial numbers of people, necessitating the construction of replacement housing elsewhere?			X

Discussion:

A substantial adverse effect on Population and Housing would occur if the implementation of the project would:

- Create substantial growth or concentration in population;
- Create a more substantial imbalance in the County’s current jobs to housing ratio; or
- Conflict with adopted goals and policies set forth in applicable planning documents.

a) The proposed project has been determined to have minimal growth-inducing impact as the project includes the creation of four parcels where one currently exists. No residential development is proposed with the parcel map and all existing development and future development meets or would be required to meet established County development standards. Any future development must meet comprehensive County policies and regulations before building permits can be issued. The project does not include any school or large scale employment centers that would lead to indirect growth. Impacts would be less than significant.

b) No existing housing stock would be displaced by the proposed project. No impacts would occur.

c) No persons would be displaced necessitating the construction of replacement housing elsewhere. No impacts would occur.

FINDING: The project will not displace any existing or proposed housing. The project would not directly or indirectly induce significant growth by extending or expanding infrastructure to support such growth. For the “Population and Housing” section, the thresholds of significance have not been exceeded and no significant environmental impacts would result from the project.

Potentially Significant Impact	Potentially Significant Unless Mitigation Incorporation	Less Than Significant Impact	No Impact
--------------------------------	---	------------------------------	-----------

XIII. PUBLIC SERVICES. <i>Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services:</i>			
a. Fire protection?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b. Police protection?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
c. Schools?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
d. Parks?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
e. Other government services?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

Discussion:

A substantial adverse effect on Public Services would occur if the implementation of the project would:

- Substantially increase or expand the demand for fire protection and emergency medical services without increasing staffing and equipment to meet the Department’s/District’s goal of 1.5 firefighters per 1,000 residents and 2 firefighters per 1,000 residents, respectively;
- Substantially increase or expand the demand for public law enforcement protection without increasing staffing and equipment to maintain the Sheriff’s Department goal of one sworn officer per 1,000 residents;
- Substantially increase the public school student population exceeding current school capacity without also including provisions to adequately accommodate the increased demand in services;
- Place a demand for library services in excess of available resources;
- Substantially increase the local population without dedicating a minimum of 5 acres of developed parklands for every 1,000 residents; or
- Be inconsistent with County adopted goals, objectives or policies.

- a) **Fire Protection:** The Diamond Springs-El Dorado Fire Protection District currently provides fire protection services to the project area. Development of the project would result in a minor increase in the demand for fire protection services, but would not prevent the Fire District from meeting its response times for the project or its designated service area. The Diamond Springs-El Dorado Fire Protection District would review the project improvement plans and parcel map filing submittal for condition conformance prior to approval. Impacts would be less than significant.
- b) **Police Protection:** The project site will be served by the El Dorado County Sheriff’s Department with a response time depending on the location of the nearest patrol vehicle. The minimum Sheriff’s Department service standard is an 8-minute response to 80 percent of the population within Community Regions. No specific minimum level of service or response time was established for Rural Centers and Rural Regions. The Sheriff’s Department stated goal is to achieve a ratio of one sworn officer per 1,000 residents. The addition of three residential parcels would not significantly impact current response times to the project area. Impacts would be less than significant.
- c) **Schools:** The project site is located within the Mother Lode Union School District. The affected school district was contacted as part of the initial consultation process and no specific comments or mitigation measures were received. Impacts would be less than significant.

Potentially Significant Impact	Potentially Significant Unless Mitigation Incorporation	Less Than Significant Impact	No Impact
--------------------------------	---	------------------------------	-----------

- d) **Parks:** The proposed project would not substantially increase the local population necessitating the development of new park facilities. Section 16.12.090 of County Code establishes the method to calculate the required amount of land for dedication for parkland or the in-lieu fee amount for residential projects. In this case, the tentative parcel map would be conditioned to require payment of a parkland dedication in-lieu park fee consistent with the procedures outlined within Section 16.12.090. Impacts would be less than significant.
- e) No other public facilities or services would be substantially impacted by the project. Impacts would be less than significant.

FINDING: Adequate public services are available to serve the project. Therefore, there is no potential for a significant impact due to the creation of three additional residential parcels at the subject site, either directly or indirectly. No significant public service impacts are anticipated. For this “Public Services” section, the thresholds of significance have not been exceeded.

XIV. RECREATION.			
a. Would the project increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?			X
b. Does the project include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment?			X

Discussion:

A substantial adverse effect on Recreational Resources would occur if the implementation of the project would:

- Substantially increase the local population without dedicating a minimum of 5 acres of developed parklands for every 1,000 residents; or
 - Substantially increase the use of neighborhood or regional parks in the area such that substantial physical deterioration of the facility would occur.
- a) Because the project would only include the creation of three additional residential parcels, it would not substantially increase the use of neighborhood or regional parks in the area such that substantial physical deterioration of the facility would occur. Impacts would be less than significant.
- b) The project does not propose any on-site recreation facilities and would not be required to construct any new facilities or expand any existing recreation facilities with the scope of this project. No impacts would occur.

FINDING: No significant impacts to recreation or open space will result from the project. For the “Recreation” section, the thresholds of significance have not been exceeded and no significant environmental impacts will result from the project.

Potentially Significant Impact	Potentially Significant Unless Mitigation Incorporation	Less Than Significant Impact	No Impact
--------------------------------	---	------------------------------	-----------

XV. TRANSPORTATION/TRAFFIC. <i>Would the project:</i>			
a. Cause an increase in traffic which is substantial in relation to the existing traffic load and capacity of the street system (i.e., result in a substantial increase in either the number of vehicle trips, the volume to capacity ratio on roads, or congestion at intersections)?		X	
b. Exceed, either individually or cumulatively, a level of service standard established by the county congestion management agency for designated roads or highways?		X	
c. Result in a change in air traffic patterns, including either an increase in traffic levels or a change in location that results in substantial safety risks?			X
d. Substantially increase hazards due to a design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?		X	
e. Result in inadequate emergency access?		X	
f. Result in inadequate parking capacity?		X	
g. Conflict with adopted policies, plans, or programs supporting alternative transportation (e.g., bus turnouts, bicycle racks)?			X

Discussion:

A substantial adverse effect on Traffic would occur if the implementation of the project would:

- Result in an increase in traffic, which is substantial in relation to the existing traffic load and capacity of the street system;
- Generate traffic volumes which cause violations of adopted level of service standards (project and cumulative); or
- Result in, or worsen, Level of Service “F” traffic congestion during weekday, peak-hour periods on any highway, road, interchange or intersection in the unincorporated areas of the county as a result of a residential development project of 5 or more units.

a,b) The Department of Transportation (DOT) reviewed the proposed project and determined it would not trip the traffic impact threshold of the General Plan. Proposed project access would consist of construction of a new onsite roadway (not yet named) to a 20-foot roadway with shoulders and an approved turnaround. The project would also include the inclusion of curb, gutter, sidewalk and an 8-foot shoulder along the project frontage on El Dorado Road. Potential environmental impacts for the on-site and off-site road improvement would be less than significant as they involve grading/road widening.

The 2004 General Plan Policies TC-Xe and TX-Xf (which incorporate Measure Y) require that projects that “worsen” traffic by two (2) percent, or 10 peak hour trips, or 100 average daily trips must construct (or ensure funding and programming) of any improvements required to meet Level of Service standards in the General Plan Transportation and Circulation Element. DOT reviewed the proposed project and determined that it would not trigger the threshold described above because of its limited size.

Potentially Significant Impact	Potentially Significant Unless Mitigation Incorporation	Less Than Significant Impact	No Impact
--------------------------------	---	------------------------------	-----------

- c) The project would not result in a change in established air traffic patterns for publicly or privately operated airports or landing field in the project vicinity. No impacts would occur.
- d) The project would be required to make on-site and off-site road improvements consistent with the provisions of the County’s Design Improvement Standards Manual (DISM). As such, the proposed project would not include any design features, such as sharp curves or dangerous intersection, or incompatible uses that would substantially increase hazards. No traffic hazards would result from the project design. Impacts would be less than significant.
- e) The project has been conditioned by Diamond Springs – El Dorado Fire Protection District and the applicant has revised the tentative parcel map to implement fire safe measures based on Fire District comments including turnarounds and turnouts, 12 foot driveway widths, and roads consistent with DOT requirements. The project has been conditioned to require an approved Fire Safe Plan prior to filing the parcel map. To reduce impacts to a less than significant level, the project shall be required to comply with the “Fire Safe Requirements” and fully implement the approved Wildfire Fire Safe Plan.
- f) Existing and future development would be required to meet on-site parking requirements identified by use within the Zoning Ordinance. Future requests for building permits would be reviewed for conformance with parking standards during the review process. Parking requirements for conventional single-family detached homes are two spaces not in tandem. Sufficient space is available on each proposed parcel to accommodate this parking requirement. Impacts would be less than significant.
- g) The proposed project does not conflict with the adopted General Plan policies, and adopted plans or programs supporting alternative transportation. El Dorado County Transit Authority reviewed the proposal and had no comments. No bus turnouts would be required for this tentative parcel map. The tentative parcel map has been conditioned by DOT to include sidewalks and an eight (8) foot shoulder along the project frontage on El Dorado Road in conformance with El Dorado County General Plan Policy TC-4i. Impacts would be less than significant. The proposed project does not conflict with the adopted General Plan Policies, and adopted plans, or programs supporting alternative transportation.

FINDING: No significant traffic impacts are expected for the project and mitigation is not required. For the “Transportation/Traffic” section, the identified thresholds of significance have not been exceeded.

XVI. UTILITIES AND SERVICE SYSTEMS. <i>Would the project:</i>				
a. Exceed wastewater treatment requirements of the applicable Regional Water Quality Control Board?			X	
b. Require or result in the construction of new water or wastewater treatment facilities or expansion of existing facilities, the construction of which could cause significant environmental effects?			X	
c. Require or result in the construction of new stormwater drainage facilities or expansion of existing facilities, the construction of which could cause significant environmental effects?			X	
d. Have sufficient water supplies available to serve the project from existing entitlements and resources, or are new or expanded entitlements needed?			X	
e. Result in a determination by the wastewater treatment provider which serves or			X	

Potentially Significant Impact	Potentially Significant Unless Mitigation Incorporation	Less Than Significant Impact	No Impact
--------------------------------	---	------------------------------	-----------

XVI. UTILITIES AND SERVICE SYSTEMS. <i>Would the project:</i>			
may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?			
f. Be served by a landfill with sufficient permitted capacity to accommodate the project's solid waste disposal needs?		X	
g. Comply with federal, state, and local statutes and regulations related to solid waste?		X	

Discussion:

A substantial adverse effect on Utilities and Service Systems would occur if the implementation of the project would:

- Breach published national, state, or local standards relating to solid waste or litter control;
- Substantially increase the demand for potable water in excess of available supplies or distribution capacity without also including provisions to adequately accommodate the increased demand, or is unable to provide an adequate on-site water supply, including treatment, storage and distribution;
- Substantially increase the demand for the public collection, treatment, and disposal of wastewater without also including provisions to adequately accommodate the increased demand, or is unable to provide for adequate on-site wastewater system; or
- Result in demand for expansion of power or telecommunications service facilities without also including provisions to adequately accommodate the increased or expanded demand.

- a) The El Dorado County Environmental Management Department reviewed and approved the proposed on-site wastewater treatment system. Therefore, the proposed project would not exceed water quality standards. Impacts would be less than significant.
- b) El Dorado Irrigation District provided a letter dated March 21, 2006, indicating that it has adequate water supplies to serve the project. The El Dorado County Environmental Management Department reviewed and approved the proposed on-site wastewater treatment system. Therefore, no new or expanded off-site water or wastewater facilities would be necessary to serve the proposed project. Impacts would be less than significant.
- c) According to the submitted preliminary grading plan, "Pre-Development and Post-Development drainage conditions will not change." (*Wilkes Preliminary Grading Plan, Gene E. Thorne and Associates Inc., May 7, 2008*) Therefore, substantial drainage pattern alteration or runoff would not occur. Impacts would be less than significant.
- d) El Dorado Irrigation District provided a letter dated March 21, 2006 indicating that it has adequate water supplies to serve the project. Potential impacts from the connecting to an existing water line within El Dorado Road would be less than significant.
- e) As stated above, the El Dorado County Environmental Management Department reviewed and approved the proposed on-site wastewater treatment system. Impacts would be less than significant.
- f) In December of 1996, direct public disposal into the Union Mine Disposal Site was discontinued and the Material Recovery Facility / Transfer Station was opened. Only certain inert waste materials (e.g., concrete, asphalt, etc.) may be

Potentially Significant Impact	Potentially Significant Unless Mitigation Incorporation	Less Than Significant Impact	No Impact
--------------------------------	---	------------------------------	-----------

dumped at the Union Mine Waste Disposal Site. All other materials that cannot be recycled are exported to the Lockwood Regional Landfill near Sparks, Nevada. In 1997, El Dorado County signed a 30-year contract with the Lockwood Landfill Facility for continued waste disposal services. The Lockwood Landfill has a remaining capacity of 43 million tons over the 655-acre site. Approximately six million tons of waste was deposited between 1979 and 1993. This equates to approximately 46,000 tons of waste per year for this period.

After July of 2006, El Dorado Disposal began distributing municipal solid waste to Forward Landfill in Stockton and Kiefer Landfill in Sacramento. Pursuant to El Dorado County Environmental Management Solid Waste Division Staff, both facilities have sufficient capacity to serve the county. Recyclable materials are distributed to a facility in Benicia and green wastes are sent to a processing facility in Sacramento. Impacts would be less than significant.

- g) County Ordinance No. 4319 requires that new development proved areas for adequate, accessible, and convenient storing, collection and loading of solid waste and recyclables. On-site solid waste collection for the proposed parcels would be handled through the local waste management contractor. Adequate space would be available at the site for solid waste collection.

FINDING: No significant impacts will result to utility and service systems from development of the project. For the "Utilities and Service Systems" section, the thresholds of significance have not been exceeded.

XVII. MANDATORY FINDINGS OF SIGNIFICANCE. Does the project:				
a. Have the potential to degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, reduce the number or restrict the range of a rare or endangered plant or animal, or eliminate important examples of the major periods of California history or prehistory?		X		
b. Have impacts that are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects)?			X	
c. Have environmental effects which will cause substantial adverse effects on human beings, either directly or indirectly?			X	

Discussion:

- a) Potential impacts to biological resources have been mitigated to a less than significant level and are not anticipated to reduce the habitat of a fish or wildlife species or restrict the range of a rare or endangered plant or animal. All potentially significant effects on biological resources can be mitigated to a level of less than significant.
- b) Cumulative impacts are defined in Section 15355 of the California Environmental Quality Act (CEQA) Guidelines as "two or more individual effects, which when considered together, are considerable or which compound or increase other environmental impacts." Based on the analysis in this Environmental Checklist, it has been determined that all cumulative impacts related to air quality, biological resources, and hazards and hazardous materials are either less than significant after mitigation or less than significant and do not require mitigation. Therefore, the proposed project would not result in cumulatively considerable impacts on these areas. Impacts are less than significant.

Potentially Significant Impact	Potentially Significant Unless Mitigation Incorporation	Less Than Significant Impact	No Impact
--------------------------------	---	------------------------------	-----------

- c) All impacts identified in this MND are either less than significant after mitigation or less than significant and do not require mitigation. Therefore, the proposed project would not result in environmental effects that cause substantial adverse effects on human beings either directly or indirectly. Impacts would be less than significant.

Mitigation Measure Agreement for P07-0027/Wilkes Tentative Parcel Map

As the applicant, owner, or their legal agent, I hereby agree to amend the above named project by incorporating all required mitigation measures, as identified in the related Environmental Checklist, which are necessary in order to avoid or reduce any potentially significant environmental effects to a point where clearly no significant adverse impacts would occur as a result of project implementation.

I understand that by agreeing to amend the proposed project through incorporation of the identified mitigation measures, or substantially similar measures, all potentially adverse environmental impacts would be reduced to an acceptable level and a "Proposed Negative Declaration" would be prepared and circulated in accordance with County procedures for implementing the California Environmental Quality Act (CEQA). I also understand that additional mitigation measures may be required following the review of the "Proposed Negative Declaration" by the public, affected agencies, and by the applicable advisory and final decision making bodies.

I understand the required mitigation measures incorporated into the project would be subject to the El Dorado County Mitigation Monitoring program adopted in conjunction with the Negative Declaration, and that I would be subject to fees for the planning staff time to monitor compliance with the mitigation measures.

This agreement shall be binding on the applicant/property owner and on any successors or assigns in interest.

IN WITNESS WHEREOF, the Planning Director or his assign, representing the County of El Dorado, and the applicant/owner or his legal agent have executed this agreement on this _____ day of _____, _____.
